

Environmental Policy

Instrument and Control Services (ICS) Limited is committed to taking a responsible interest in the environmental impact of its undertakings.

This policy has been developed in accordance with ISO14001, the Environmental Protection Act and other relevant legislation.

This policy has been developed to demonstrate our commitment to preventing pollution. Employees must remove litter and debris for licensed waste disposal. They must also ensure any spillages of oil or fuel are prevented by maintenance and inspections and accidental spills must be contained and removed or cleaned up.

This policy is designed to cover railway projects as well as non-railway work. It is updated annually to address relevant issues of the Railway Safety Plan.

The company's environmental impact is minimal as we are not involved in excavations or intrusive works and have no input into the product selection, acceptance or disposal process.

The Company is committed to reducing its impact on the environment through the adoption of best practices and by meeting any regulations and requirements issued by its Clients.

The Company is committed to reducing environmentally significant aspects by:

- Complying fully with any relevant statutory provision.
- Minimising the environmental impact of its work on sites.
- Ensuring continuous improvement by meeting annually revised objectives.
- Minimising waste – where waste is created it will be managed to achieve compliance contained in relevant statutory regulations.

The current Environmental Objective is to reduce environmental impact on worksites by briefing all persons on site about litter control and reducing noise.

Environmental objectives are set and monitored at the annual management review.

This policy is made public by issue to all Clients / Customers / the Public upon request.

All employees are briefed on this policy.
